

Frontend Developer Intern / Trainee

We are looking for a **curious, motivated, and growth-oriented Frontend Developer Intern / Trainee** who is eager to learn modern web development in a collaborative product environment.

You will work closely with design, frontend, and backend teams to build **responsive, performant, and user-focused web applications** while gaining hands-on experience with real production systems.

Objectives of the Role

- Learn how modern, *data-driven* frontend applications are designed and built
- Gain practical exposure to component-based architecture and scalable frontend patterns
- Write clean, reusable, and maintainable code with mentorship from senior engineers
- Strengthen debugging, problem-solving, and performance optimization skills
- Contribute to real product features while continuously improving technical knowledge

Responsibilities

- Convert *UI/UX* designs into functional and responsive web interfaces
- Assist in building reusable components and design-system-driven UI
- Support development of accessible and mobile-friendly user experiences
- Participate in debugging, testing, and performance optimization
- Collaborate with designers and backend engineers to understand product requirements
- Follow coding standards, Git workflows, and documentation practices
- Stay updated with modern frontend trends, tools, and best practices
- Document learnings, implementation decisions, and development progress

Required Skills & Qualifications

- Basic understanding of **HTML, CSS, and JavaScript (ES6+)**
- Familiarity with **React** or strong willingness to learn component-based frameworks
Understanding of responsive design and cross-browser compatibility
- Basic knowledge of **Git** and version control workflows
- Awareness of UI/UX fundamentals and usability principles
- Strong learning mindset, curiosity, and problem-solving ability
- Ability to collaborate and communicate effectively in a team

Preferred (Nice to Have)

- Exposure to **TypeScript** and any other library or framework for Frontend
- Basic familiarity with backend technologies (Node.js, .NET, Python, etc.), using REST API's or GraphQL
- Awareness of modern build tools like **Vite**, **RSBuild** or **Webpack**
- Basic understanding of deployment or cloud platforms such as **Amazon Web Services**, **Vercel**, **Docker**
- Exposure to testing concepts (unit testing, component testing, linting tools).
