

Create a **.NET Web API** project using **PostgreSQL** as the database.

You need to design and implement the following 3 entities based on the ERD below:

Requirements

Build the project with the following requirements:

1. Use **ASP.NET Core Web API**
2. Use **Entity Framework Core**
3. Use **PostgreSQL**
4. Create proper **entity models, DbContext, and relationships**
5. Use **EF Core migrations** to create and update the database schema
6. Create **controllers** for all entities

Entity Rules

Customer

- A customer can have many orders

Order

- An order belongs to one customer
- An order can have many order items

OrderItem

- An order item belongs to one order

Required Endpoints

Customers

- GET /api/customers → Get all customers
- GET /api/customers/{id} → Get customer by id
- POST /api/customers → Create a customer
- PATCH /api/customers/{id} → Update a customer
- DELETE /api/customers/{id} → Delete a customer

Orders

- GET /api/orders → Get all orders
- GET /api/orders/{id} → Get order by id
- GET /api/orders/customer/{customerId} → Get all orders for a specific customer
- POST /api/orders → Create an order
- PATCH /api/orders/{id} → Update an order
- DELETE /api/orders/{id} → Delete an order

Order Items

- GET /api/orderitems → Get all order items
- GET /api/orderitems/{id} → Get order item by id
- GET /api/orderitems/order/{orderId} → Get all items for a specific order
- POST /api/orderitems → Create an order item
- PATCH /api/orderitems/{id} → Update an order item
- DELETE /api/orderitems/{id} → Delete an order item
